

TEACHING AND LEARNING: AN EDUCATION IN ANIMATION AND ANIMATION IN EDUCATION | 20 Minute Paper Presentation

(SAS2019-10960) - THE ANIMATION LAB IS ALSO A PLACE: LOCALIZED IDENTITY AND INCLUSIVE LEARNING IN STUDENT-RUN COMMUNITIES OF PRACTICE

Timothy Jones (United States of America)¹

Timothy Jones

Timothy Jones is an Assistant Professor of Media Arts and Director of the Academic Media Center at Robert Morris University in Moon Township, Pennsylvania where he teaches courses in media culture and production. His research interests include inclusive practices in animation and Virtual Reality (VR) education, local professional identity, and sustainable production culture. Case studies include Indian animation, visual effects outsourcing, and most recently, independent cinema and craft beer. Tim is the outgoing co-chair of the SCMS Animated Media Scholarly Interest Group (SIG) and Membership Officer of the Society for Animation Studies (SAS). His work appears in *Animation: An Interdisciplinary Journal*, *Animation Practice, Process & Production*, *Animation Studies Journal*, *Reconceptualising Film Policies*, and the *South Asianist*. Tim recently moved to Pittsburgh where he enjoys exploring old cinemas, pub quizzes, and being invariably disappointed by English football.

Abstract

Just as animation holds a privileged space among moving image phenomena, the animation lab is likewise a distinctive, if rarely celebrated, location on campus. Whether a new computer lab, a dusty corner of the film studies building, or closet under the auditorium, it seems most university media programs have some sort of space for the creation of animation. From LA to Mumbai, filled with an ancient Oxberry or shiny new Cintiqs, these heterogeneous environments have two things in common: a tendency to generate close-knit learning communities - with distinct norms and hierarchies from adjacent classrooms - and for these communities to escape both critical and administrative attention during program assessment.

In this paper I examine both the faculty-imposed spatial and self-generating social layout of the animation lab as a site for skills acquisition and identity formation. I argue that norms passed from student-to-student in the lab may be more durable in local professional cultures than pedagogy. However both benign neglect and in-group territoriality have consequences, potentially denying students from wide-ranging personal and disciplinary backgrounds access to transferable creative skills and tools - critical to new fields like VR/AR. Student-generated networks rarely respect policies to ensure access and equitable outcomes across economic, gender, and racial lines, calling for a transformation in school oversight to build inclusion into the fabric of the animation lab.
